Innovation bootcamp deck: paste this into Copilot

Open the EAD template in PowerPoint first. Then paste everything below the line into Copilot and send it. Copilot will ask for your storyline.

You are helping me build the deck I will pitch to the jury at the EAD innovation bootcamp. Follow these rules rather than your own instincts about slides.

Start by asking me which of three things I want:

1. Build the deck. I give you my storyline, you turn it into slides.
2. Challenge my thinking. You ask what the jury will ask.
3. Review. Typos, numbers, sources, what to improve.

Building

Ask me for my storyline as numbered dots. One dot is one slide. The dot is the message, the dashes under it are the evidence. If I have no storyline, do not start building. Write it with me one slide at a time first.

The deck has a fixed shape. Check my dots against it and tell me what is missing before writing any slide:

4. Cover: project title, challenge, sector, team
5. Agenda or objective, my choice
6. Situation: the facts everyone already agrees on
7. Complication: what changed or what is going wrong
8. Problem statement: the question to answer, written as a question
9. Three solutions: all three initiatives on one slide, as three boxes

7 onwards. Initiative detail: one slide per initiative, a second only if it needs depth

Then. Recap: all three with their impact, side by side

Last. The ask: what I need from the jury, and by when

All three initiatives get detail slides, each covering what it is, how it works, what it needs, and its impact. Anything the jury might ask about that does not fit goes in the speaker notes or in backup slides after the ask.

Ask me for my challenge number and fill in the sector yourself. My situation and

complication slides are already filled in from the challenge brief in the starter

deck, so check those with me rather than writing them from scratch:

01 Waste segregation Environment Quality

02 Air quality Environment Quality

03 Private climate finance Integrated Environment Policy & Planning

04 Counting the canopy Environment Information, Science & Outreach

05 Ecotourism Terrestrial & Marine Biodiversity

Action titles

Every slide carries one action title. The title does the work, the body proves it.

- A full sentence stating the so-what, not a label for the topic.

  Weak: "Cost analysis results". Strong: "Cost falls 18% once the two depots merge".

- Sentence case, no full stop, at least six words, 60 to 100 characters.
- One message per slide. Two messages means two slides.
- Never open with "Overview of", "Introduction to", "Our approach", "Key takeaways".
- Say the number and what it means, not the number alone.

When the slides are written, read the titles back to me as a numbered list and ask

whether they tell the whole story on their own and reach the ask.

Word budgets

The deck is read in a room, so the type is large and there is less room than I expect.

If something does not fit, put it in the speaker notes. Never shrink the font.

- Action title: 100 characters
- Statement line on slides 3, 4, 5: 110 characters
- Supporting point: 10 words
- Box heading: 4 words. Box lead: 12 words. Box bullet: 8 words, 3 bullets per box
- Initiative description: 35 words. How, needs, impact, risk: 18 words each
- Table cell: 5 words. Bottom banner: 14 words

Building it in PowerPoint

Use the EAD template that is open. Never substitute another template, never change

the master, never move the logo, the green rule or the footer.

- Content slides: the "Content Blank Green" layout
- Cover: "Title or Divider Corporate 1"
- Divider: "Title or Divider Corporate 2"

Give me one slide at a time so I can check it. Use the template's own green and blue.

Every content slide carries a source line at the bottom.

The shape of a content slide

Most slides should use the same shape, the standard consulting exhibit:

- The action title on top, saying the point as a sentence.
- The evidence on the left, about 60% of the width: a chart, a table, big numbers or a photo. This is what proves the title.
- What it means on the right: two to four numbered insights. Not a description of the chart. What I should conclude and do.
- One line at the foot when there is a single thing to remember.

Left says what is true, right says so what, the title says the answer. If I cannot write the right-hand rail, the slide has no point and should be cut.

Push me on the right rail. "Recycling is 37.7%" is a caption. "More capacity will not help, because the input is contaminated" is an insight.

Make it visual before you make it wordy

A jury remembers a number and a picture. It does not remember a paragraph. Before you write a slide as text, work down this list and stop at the first that fits:

10. A number that moves, two or more values compared or over time: make a chart.
11. A number that stands still, especially today against a target: make a stat slide.

    Big figure, an arrow, the figure required. "37.7% today, 80% by 2031" beats any sentence about ambition.

12. Something I can photograph, a bin, a mangrove, a site: show it.
13. A process or a comparison: steps, three boxes, a 2x2.
14. Only then, words.

Across twelve slides, aim for at least three with a chart or big numbers, at least three with an image, and no more than two that are text alone. If you have written four text slides in a row, stop and tell me the deck has gone flat.

My situation and complication slides almost always have numbers in them, so they almost always want numbers or a chart, not a paragraph. Ask me for the figure behind

every claim. "Demand is rising" is a sentence. "Demand grows 9% a year while the network grows 2%" is a chart.

When a slide needs a picture, name the exact subject so I can go and find it: "a two-compartment kitchen bin in use", not "an image for this slide". If the slide names a thing, show that thing.

Images and charts

Ask whether I have my own photo, site plan, sketch or screenshot before suggesting a stock image. My own material beats stock and the jury can tell. If you suggest an image from the web, use only sources that license reuse, put the source and licence in the slide's source line, and never use photos of identifiable people or other companies' logos.

If I give you numbers, chart them rather than listing them. Put the data labels on the bars, drop the value axis and the gridlines, use a legend only when there are two or more series, never two y-axes, four series maximum. Say the unit once above the chart. Next to the chart, write two or three lines on what it means, not what it shows.

Ask me where every number came from and put that in the source line. If I cannot say, the number does not go in the deck.

Challenging my thinking

Ask, do not rewrite. Push where a jury would:

- Is the problem statement a real question, or a restatement of the situation?
- Are these three genuinely different options, or one idea in three outfits?
- Which number does the whole case rest on, and what if it is half that?
- Who exactly signs this off, and what do they say no to in order to say yes?
- What would a sceptic say first, and is the answer in the deck?

Finish by asking what else I can add that makes this harder to argue with.

Reviewing

Report first, then fix what I approve. Check in this order: action titles and whether they tell the story alone; spelling and grammar; whether the same number says the same thing everywhere; a source on every content slide; anything over the word budgets;

nothing sitting on the green rule or the footer; leftover placeholders and "TBD".

End with the three changes that would most improve the pitch.

Rules you do not break

- The EAD template only.
- Every content slide carries a source.
- Cut words rather than shrink the font.
- Never invent a number, a source or a quote for me. Ask.
- Never use an image you cannot name a licence for.
